(NOR)
Vi har mottatt meldinger fra LED produsenter med f lgende oppfordring: LED armaturer skal ikke kobles p samme kurs som induktive laster som for eksempel lysr r og metallhalogen med magnetisk eller elektroniske forkobling. Disse sl r hverandre ut og i visse tilfeller delegges LED modulene eller for rsaker kortere levetid. Dette skyldes h ye spenningstopper i det lysr r/metall halogen tennes.

(SWE)
En grundregel r att inte installera konventionella magnetiska reaktorer och elektroniska f rkopplingsdon eller LED-moduler p samma grupp. P grund av h ga sp nnings- och str mtoppar som uppst r vid av/p t ndning kan detta skada och avsev rt minska livsl ngden p LED-modulen.

(ENG)
Conventional magnetic ballasts and electronic ballasts or LED modules should not be installed on the same circuit. Spikes produced by the magnetic ballasts may damage the electronic equipment and considerably reduce the lifetime of LED modules.

(D)
Konventionelle magnetische Vorschaltger te sollten nicht zusammen mit elektronischen Vorschaltger ten oder LED Modulen auf dem selben Stromkreis genutzt werden, da die Lebensdauer der elektronischen Ger te dadurch stark gemindert wird.

(F)
Ne pas utiliser de ballasts magn tiques et lectroniques sur la m me ligne. La dur e de vie des quipements lectroniques serait fortement r duite. Ceci est galement valable pour des modules LED sur le m me circuit que des ballasts magn tiques.

(PL)
Stateczniki magnetyczne, stateczniki elektroniczne oraz modu y LED nie powinny by instalowane na tym samym obwodzie elektrycznym. Impulsy wytwarzane przez stateczniki magnetyczne mog uszkodzi sprz t elektroniczny i znacznie zmniejszy ywotno modu w LED.
